To improve instruction, appropriate and prescriptive feedback must be given. To improve school-wide instructional practices, a system must be developed and followed to increase fidelity of implementation of those practices. RAISEup Texas, a middle school transformation model in Central Texas, has developed a system that school leadership teams are using to improve their school-wide instructional model and practices. Using data, school leaders identify areas to target and use the RAISEup Texas Instructional Change Cycle to move the needle on learning outcomes in their schools. Participants in this session will learn about the cycle and how it has improved learning at many schools in Central Texas.
