KUCRL researchers and developers are interested in your thoughts about the need for and types of instructional adaptations of the SIM. SIM teachers and professional developers are experts in current instructional needs. As they use Content Enhancement Routines, learning strategies, and comprehensive reading programs, adaptations are sometimes made. This session will invite discussion of: (1) examples of how teachers and professional developers have encountered the need to adapt published instructional materials, and how they responded, and (2) how SIM can be made responsive to newer instructional models like UDL, blended learning, and more inclusive schools. A key outcome for this session is to identify ways to keep SIM relevant and make it responsive to the changing landscape of education.

Presenter: Janis Bulgren
