Strategic Instruction Model using Data-Driven-Decisions. This professional learning opportunity will encompass key meta-analysis that is used to determine and enhance instructional practices with CER routines. Instructional coaches from HAYS CISD will provide the framework, collaborative processes, possible activations, and results from the systematic processes employed and facilitated within their respective schools. Coaches will provide reports generated from district data created reports and how those reports directly impact the “SMARTER” planning process and cycle. As a participant, get ready to learn, collaborate, and engage in rich discussions on how data drives responsive teaching using SIM research-validated routines. You will leave with a strong understanding of how data drives instruction on campuses invested in using SIM.
