Panelists from the KUCRL, a school district in California, SRI International, and the Center for Applied Special Education Technology (CAST) will present ongoing, iterative design-based research supported by an Investing in Innovation (i3) grant from the U.S. Department of Education. The goal was to develop sets of integrated Content Enhancement Routines for use in history and social studies classes, and to provide innovative technological supports for use of the routines and strategies. For the first time, four routines are integrated into a single course unit, and also are designed to be used in a Google environment. Research was conducted in the states of Virginia and California. Panelists will discuss goals, challenges, and findings to date. Specific topics will include the policy context, design of the integrated Content Enhancement Routines, professional development model, and technology development, as well as challenges working across different districts in states with varying schedules, standards and expectations.

Presenter: Ellen Schiller
Co-Presenters: Jose Blackorby, Jan Bulgren, and Cathy Spriggs
