Optimistic to offer educators opportunities to grow their repertoire of professional learning in SIM™, the Virginia Department of Education launched two options of earning micro-credentials with Content Enhancement Routines. One has proven promising, the other has not.

This poster session will share lessons learned with developing protocols with targeted expectations and a willing network of SIM™ professional developers to provide on-going coaching for micro-credentialing. The development, roll-out, deadlines, collaboration with KUCRL and Badgelist, coaching and feedback process and communication necessary with all these moving pieces will also be shared. Come and learn how the VDOE, region-al T/TACs and a statewide SIM network collaborated to support the impact of Content Enhancement.
